

Project Brief

The aim of this project is to implement and design an application to demonstrate the designer's prowess with Object Oriented development practises, as well as proficiency with the Java language.

I aim to provide a software solution to the problem of paper stock take inefficiency.

Wireframe

This is the initial wireframe design of my application. I've stayed true to it in my final design.

Some changes that ended up occurring was the move of the scroll bar from the side of the whole window to the side of just the stock item scroll panel, as well as the reordering of name and description columns.

StockTake 9000

code	quantity	price	name	description
0001	31	0.99	sponge	n/a
0002	65	1.49	soap	n/a

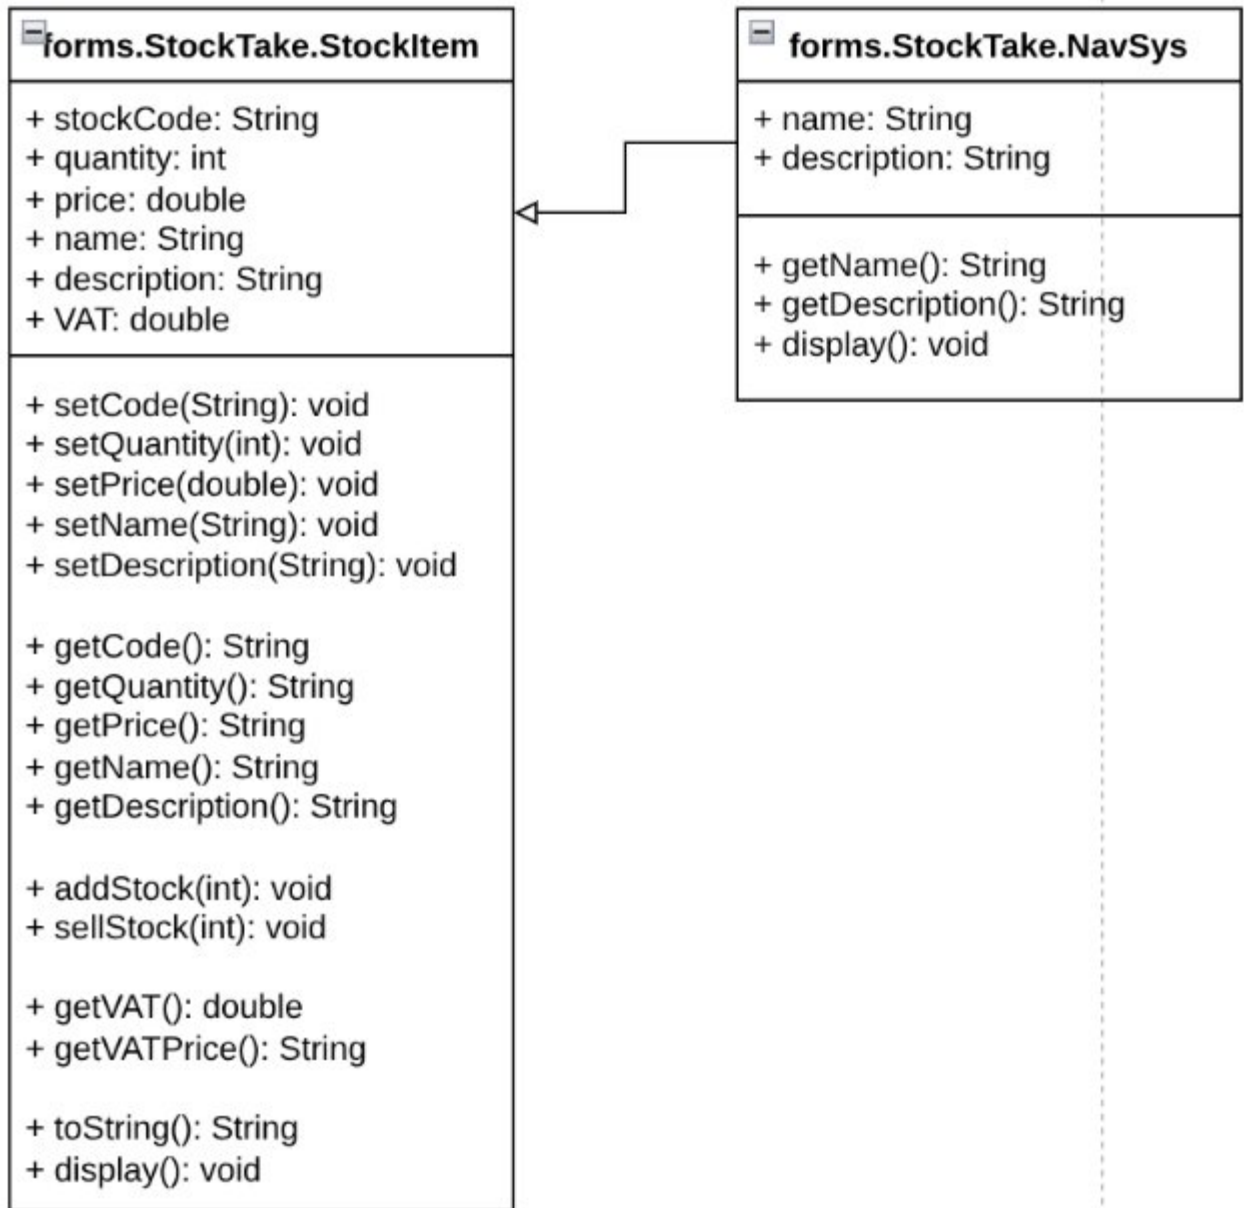

Stock Entry

code quantity price name description

apply

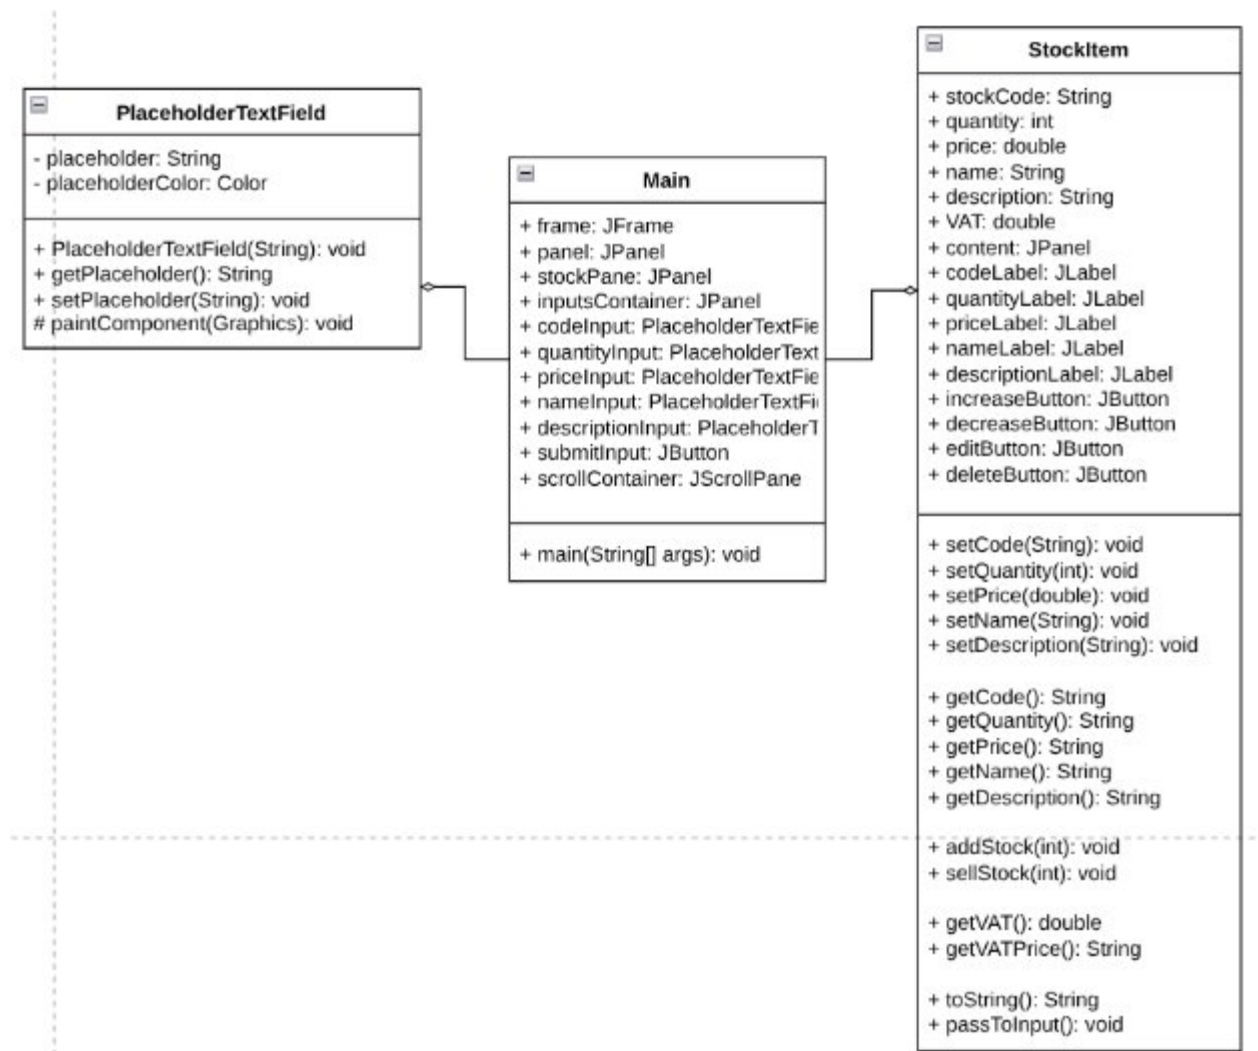

Initial Design

This is the initial UML design. I used this as a crux to design my application.

Final Design

This is a faithful UML diagram of my application.

Accreditation

This project is for the Object Oriented Programming module for the Software Engineering for Business (BSc Hons) degree at the the University of West England, Bristol.

Completed wholly by student Ninsang Sherpa (25023481), using various tools listed below.

- IntelliJ IDEA development environment
- IntelliJ UI Swing Designer plugin
- Java programming language
- Draw.io graphing application
